

17. Cleaning

The IMPRESSA machine comes with an integrated Cappuccino cleaning programme. The operation lasts about 15 minutes.

i Your stockist can supply original JURA cleaning tablets which are optimised for the cleaning programme of your IMPRESSA. We would like to point out that using unsuitable cleaning tablets may damage your machine and leave traces in the water.

i Once started, the cleaning operation must not be interrupted.

i The filler funnel for preground coffee must be cleaned after every cleaning programme (11).
